Summary

Data Engineering professional with 1+ year of industry experience building ETL pipelines, backend data systems, REST APIs, and cloud-based data workflows. Enterprise experience at P&G (Procter & Gamble) through Tranzita Systems, working with Azure Databricks, Azure Data Factory, Delta Lake, ADLS, Blob Storage, SQL Server, Python, and SQL across supply chain, inventory, and e-commerce domains.

Technical Skills

Languages: Python, SQL, PySpark, Pandas, NumPy

Data Engineering: Azure Databricks, Azure Data Factory, Delta Lake, ADLS, ETL/ELT

Databases: SQL Server, Azure SQL Database, PostgreSQL, MySQL, MongoDB

Cloud & DevOps: Microsoft Azure, AWS, Docker, Git, GitHub, Linux

Data Concepts: Data Modeling, Schema Design, Query Optimization, ACID Transactions, Data Validation

Formats: Parquet, CSV, JSON, REST APIs, SharePoint

Professional Experience

Tranzita Systems **April 2025 – Present**
Software Development Engineer 1, Data Engineering (P&G Collaboration) *Lucknow, U.P.*

- Worked on enterprise data engineering projects for P&G (Procter & Gamble), developing backend pipeline layers, SQL transformation logic, ingestion workflows, and data processing components across supply chain, inventory, and e-commerce domains.
- Built and optimized scalable REST APIs for high-volume structured data requests, reducing data latency by 25% for 1,000+ users through SQL query and response optimization.
- Developed real-time data streaming workflows using Node.js and Socket.IO to deliver operational data to monitoring dashboards, reducing reporting lag by 30%.

Predulive Edutech Foundation **Jun 2023 – Jan 2024**
Software Developer Intern *Lucknow, U.P.*

- Optimized MongoDB queries and indexing strategies across 5,000+ listings, reducing average query execution time by 35%.
- Designed backend APIs for an admin reporting platform managing 10,000+ user records, improving operational data visibility by 40%.

Data Engineering Projects – Tranzita Systems x P&G

Supply Chain Demand Forecasting & Prediction **2026 – Present**
Python, Azure Databricks, SQL, Pandas

- Developed a supply chain demand forecasting pipeline using historical sales data, previous-year trends, and recent monthly sales patterns to predict product demand for current and upcoming periods.
- Processed and analyzed historical and current-period sales data to identify seasonality, demand trends, and recurring product-level patterns for data-driven inventory and supply planning.

E2E RCA – Global Supply Chain Pipeline **2025**
Azure Databricks, Python, Blob Storage, SQL

- Built a global Root Cause Analysis pipeline on Azure Databricks, processing multi-country supply chain data from CDL (Central Data Lake) at enterprise scale.
- Reduced end-to-end data processing time from 24 hours to under 60 minutes, enabling near-real-time inventory visibility for P&G stakeholders.

Online Availability RCA – Inventory Ingestion Pipeline **2025**
Databricks, Python, ADLS, Delta Lake

- Built a Databricks ingestion pipeline loading inventory records and order history from SharePoint, REST APIs, and ADLS into Delta Lake.
- Supported proactive inventory management through automated data processing and stakeholder alerting, contributing to a 15% reduction in stockout incidents.

Supply Chain Agility and Connectivity **2025**
Python, Azure Databricks, SQL

- Developed end-to-end ETL pipeline components on Azure Databricks to process large volumes of supply chain and consumer behavior data from SQL databases and flat files.
- Improved data refresh workflows and reduced processing latency by 40% for P&G supply chain operations teams.

Education

KIPM College of Engineering and Technology **2021 – 2025**
Bachelor of Technology in Computer Science and Engineering, CGPA: 7.5 *Gorakhpur, U.P.*
